Dear Adao,

With this e-mail we would like to welcome you once again at Contabo!
Your order has been processed successfully. You can find all login data and details necessary to manage your order below.

If you just started using our services, we recommend you check our [First Steps with Contabo](#) tutorial.

Customer ID 14624126 (Order ID 14624148)

Please quote your customer ID in all communications with us, whether on the telephone or by e-mail. This ensures the fastest processing of your requests.

Your VPS

IP address	server type	Location	user name	password
5.189.174.120	Cloud VPS 20 NVMe (no setup)	Hub Europe	root	as chosen by you during order process

You can access and configure your VPS via SSH (in case of a Linux operating system) or via Remote Desktop (in case of a Windows operating system) using the login details above.

Additionally you can connect to your VPS via VNC. This might be handy if, due to a wrong firewall configuration, for example, your server is not accessible normally anymore. In order to establish a VNC connection, you will need a VNC client such as UltraVNC. Since VNC is not an encrypted protocol, we recommend not to prefer it to SSH or Remote Desktop. Please always remember to log out before you close your VNC session. You can change the VNC password at any time within the customer control panel. Furthermore, you can disable the VNC access within the customer control panel.

Your IPv6 subnet

Each dedicated server and each VPS comes with a /64 IPv6 subnet in addition to its IPv4 address. You can use the addresses of such a subnet freely on the associated server/VPS. IPv6 is already preconfigured on our servers but has to be activated explicitly in some cases. You can find out how to activate IPv6 and further information on the subject in our [tutorial](#).

subscription type	IPv4 address	IPv6 subnet
Cloud VPS 20 NVMe (no setup)	5.189.174.120	2a02:c207:2307:8661:0000:0000:0000:0001/64

Service and support

We are working hard to avoid any kind of service interruption. Should we, however, face a temporary interference in one of our data centers, you can stay informed about the current status on the website <http://www.contabo-status.com>. Moreover, we constantly inform on this website about scheduled, ongoing or recently finished maintenance works on server systems in our datacenters. In case your subscription should ever be affected by such a planned maintenance, of course you will also receive a personal notification via e-mail prior to this.

If you have questions regarding one of your services you will be able to find most answers to questions in [FAQ](#) or maybe in our [Product documentation](#). If you need further assistance, our [support team](#) will be happy to help you at any time.

If you would like to order additional domains now or later, this is no problem. Please use the following link to order further domains anytime you want: <https://my.contabo.com/domain/>.

In order to comply with our duty to supply information we are sending you our general terms, which form the basis of the agreement, attached to this e-mail for your attention.

The services due to be rendered by the provider, which may already have been rendered partially, as well as the respective prices which are to be paid monthly can be found in the confirmation e-mail sent to you after the placement of your order, on 11.2.2026. You will receive a detailed invoice for this at the start of each month.

Should you have any questions, please do not hesitate to contact us. All contact details as well as our complete address can be found on [our website](#).

We wish you much success with your services!

Best regards,
Contabo Support
